

CUSTOM SIGHT & SOUND

Environmental Policy Statement

Custom Sight and Sound Limited recognise that through our business operations we influence the local, regional and global environment and are committed to minimising this impact by the undertaking of, and adherence to, our corporate environmental policies.

These are integrated within our corporate Business Management System procedures / policies which in turn provide a regulated auditable framework for our commitment for:

- The prevention of pollution;
- Compliance with all relevant environmental legislation;
- Compliance with industry codes and best practice;
- Compliance with contractual obligations;
- Compliance with local agreements and restrictions where encountered.

In association with the above we will promote the use of raw materials from renewable sources by working with our approved suppliers and specialist sub-contractors to, in turn, minimise their operational impacts on the environment in line with our own practices.

We will further promote the use of recycled materials and recycling practices, the overall reduction of material consumption by utilisation of items with an increased life span and / or higher efficiency rating and minimisation of waste at all levels.

We will ensure all employees are in a position to understand and comply with this environmental ethos by provision of appropriate information, training and consultation procedures.

Through an internal and external audit regime we will continually review all aspects of our environmental performance, measured against documented criteria, and by implementation of the appropriate corrective actions ensure environmental policy compliance and improvement.

We are committed to operate and maintain a management system which will satisfy the requirements of BS EN 14001:2015.

Ian Bolt
Managing Director
