The Bishops London is a high-end development that encompasses three mansion houses and a fourth building, which is divided into four apartments and a penthouse. Custom Sight & Sound had to install a system that would satisfy both Day One requirements – door entry, lighting, and BMS control – while offering sufficient Day Two upgrade paths for the end purchasers.

The integrator opted for products from Crestron's Pyng range in order to keep costs down, while still providing a high-quality system. Using Crestron's Green Light lighting control solution, Custom Sight & Sound was able to operate from a single processor within each property, thus increasing value across the entire scheme. All integrated systems are combined into a custom GUI, that was developed within the integrator's own programming department to provide a simple and reliable control solution across the development.
